'Attending the 23 rd fluid sealing conference organised by BHR Group, my primary interest was the presentation on test method development for elastomeric seals used under low temperature conditions. I was pleased to come away from the two day event with a comprehensive insight into current research activity in technical areas of sealing that I am far less familiar with.

11th International Conference on Pressure Surges 2012

Pressure surges have long been known to cause well-control problems. In 1934, Cannon 1 identified pressure surges resulting from pipe swabbing as a possible cause of fluid influx, and in extreme cases, blowouts. In 1951, Goins et al. 2 measured positive pressure surges and linked surge pressures with lost-circulation problems.

Pressure surges in critical wells are commonly determined with steady-flow surge models. In these models, the drilling mud is perfectly displaced by the pipe motion. These models neglect fluid inertia, the compressibility of the fluid and the wellbore, and the axial elasticity of the pipe.
