5.1. •BOILING POINT DETERMINATION.

The physical properties of a compound, such as melting point and boiling point can provide useful information which can help in the identification of a sample or to establish its purity. Since the boiling point of an unknown sample under the same conditions (e.g.same

H<sub>2</sub>O exists in three different physical states-solid ice, liquid water and water vapour. In the liquid state, the forces of interaction are less and therefore, water exists as a liquid at room temperature.
