LabVIEW Function and Vi Reference Manual: National ...

LabVIEW loads the referenced VI into memory when you load the top-level VI. When the Static VI Reference function outputs a strictly typed VI reference, LabVIEW reserves the referenced VI as long as the top-level VI is running. LabVIEW closes this reference when the top-level VI is no longer in memory.

To connect to the VI Server running for the executable, open a new VI and place the Open Application Reference function. Wire a constant or control to the machine name input and set it to localhost. If you don't do this, your VI will try to connect to the default LabVIEW VI Server instead of the executable.

Passing Data Between LabVIEW Executable Reference VI and a ...

A VI-Ref can be counted as similar to function pointers in other programming languages, but LabVIEW can handle such function pointers across the network. Having obtained the VI-Ref, one can (recursively) access all of its properties and components and can as well call the VI or perform some actions with it. The former is done using Property Nodes.

MLPI LabVIEW Reference (mlpi4LabVIEW)

After my previous post about Learning LabVIEW OOP there were some comments on by reference vs. by value which often come up when talking about OOP. I think there are two reasons that these are tightly linked to conversations about OOP. In "classical" OOP languages everything is by reference but in LabVIEW OOP is by value.
