$L^{-1}[X(s)]$ is a function $x(t)$ such that $X(s) = L[x(t)]$. It can be shown that the Laplace transform of a causal signal is unique; hence, the inverse Laplace transform is uniquely defined as well.

denoted by $f(t)$ or $F(s)$ is defined by the equation. whenever the improper integral converges. Standard notation: Where the notation is clear, we will use an upper case letter to indicate the Laplace transform, e.g, $L(f; s) = F(s)$. The Laplace transform we defined is sometimes called the one-sided Laplace transform.
