The high-voltage (400 kV and 275 kV) electricity substations in the United Kingdom are listed in the following tables. The substations provide entry points to, and exit points from, the National Grid (GB) or Northern Ireland Electricity Network. Entry points include power stations, major wind farms and inter-connectors from other countries and regions.

Electricity Distribution Map. The electricity distribution networks are regional grids that branch from the national grids to deliver power to industrial, commercial and domestic users.

ENA - Electricity distribution map

Once power is handed over to the distribution network from the National Grid, it will probably pass through several substations before reaching your home. Generally, the 132kV will be stepped down to 33 kV (sometimes 66 kV) for the first intermediate stage of distribution.
