Conventional plunger lift systems use well shut-in pressure buildups to efficiently lift columns of fluid out of well... Shutting in the well to allow bottomhole pressure to increase, then venting the well to the atmosphere (well blow down). Swabbing the well to remove accumulated fluids ...

Natural Gas Well Production Problems - AONG website

Mr. Peter Williams X MR. PETER WILLIAMS has over 35 years of industrial experience, most of which were in oil and gas processing. His experience includes plant process engineering, operations supervision, project development and business case definition, project technical support, plant engineering management, and internal consulting, primarily with Saudi Aramco.

Troubleshooting Oil and Gas Processing Facilities Training ...

Natural gas, as it is used by consumers, is much different from the natural gas that is brought from underground up to the wellhead. Although the processing of natural gas is in many respects less complicated than the processing and refining of crude oil, it is equally as necessary before its use by end users.

» Processing Natural Gas NaturalGas.org

After leaving the gas well, the first step in processing natural gas is removing oil, water, and condensates. This step is typically done at the well site. First, heaters and scrubbers are used to prevent the temperature of the gas from dropping too low and remove large-particle impurities, respectively.

How Do You Process Natural Gas?

natural gas. Production Wellhead: The wellhead is the component that connects directly underground to the natural gas well ... the processing and treatment plants where it is further purified and refined. Gathering lines may also ... these problems may result in a pipeline failure, which may lead to devastating effects.

Natural Gas Pipelines: Process from Well

Natural Gas - From Wellhead to Burner Tip The process of getting natural gas out of the ground, and to its final destination to be used, is a complicated one. There is a great deal of behind-the-scenes activity that goes into delivering natural gas to your home, even though it takes only the flick of a switch to turn it on.

Process Improvement Engineering, Consultants & Engineers

Natural gas liquids (NGLs) or hydrates in the gas condense before the gas exits to the gathering system. Processes to keep the wellhead operational include the removal of water and condensates that accumulate in limited onsite storage breakdown. Automated shut off systems stop production if these tanks fill to capacity.

RBN Energy - Freeze-off

Before enactment of the Natural Gas Policy Act of 1978 (NGPA), the price that interstate pipelines could pay for gas at the wellhead was set by federal regulation. o The Federal Energy Regulatory Commission (FERC) determined the price that should be paid a producer based upon its cost of making that gas available to the interstate system.
